U.S. Patent and Trademark Office PTOL-303 (Rev. 4-05)

Continuation of 11. does NOT place the application in condition for allowance because: a plurality of vertical islands are enclosed/within the outer perphery of the third metal (25, 26) it therefore is within the broad scope of applicant's claim. Furthermore, in regards to applicant's claim that there is no teaching of a metal and barrier along the contour as claimed. Examiner' disagrees. Chan (Col. 3, Lines 25-28) discloses its conductor (32) as multi-layer including TiN (interfacing, barrier layer) as its first layer and then a subsequent metal ("TiN/Al..."), wherein TiN as the interfacing barrier layer exhibits a non-planar shape (i.e. same contour/shape as the layers it is on).

Continuation of 13. Other: Ouellet (U.S 6,127,266) has been added to an 892 to further evidence that the script, TiN/Metal, indicates that TiN is used as the interfacing barrier layer. See Col. 1, Lines 11-15.
